GENERAL AND REVENUE SECRETARIAT.

Serial Nos. 1-27.

Major Part B for May 1874

SUBJECT.

Experimental Farm at Bangalore.

under seed
V. subcylindrica

Memo: Col. Reed. Nov 22/71

- Col. Roddam proposes to dam off a certain portion of the Sumpagi tank for the purpose of growing it with sorghum & maize. Col. Sauley even proposes more than this -
2. Col. S. has always had a fixed intention to do away with the Sumpagi tank and the Sup: of the Div: on the contrary has, as often opposed this measure, as being ruinous to the mills of the cultivators below
 3. Perhaps however if it is necessary to take in with Col. Roddam's proposal, that he will have an exactly accurate survey of such proposals as the accomp^d sketch barely gives more than a very general idea.
 4. By restoring the old Bedehully valley tank, creating a fine reservoir there in the water bearing stratum of that valley, all the water flowing to waste over the Alton tank waste weir, in 9 years out of 10 when he stopped & distributed among others to Miller's and Scroby & Hampshire. There is a perennial supply of water in that valley -

Submitted & approved of
27.11.71 J.P.

11 Dec. 1871. -

The points proposed in this corner: by Col. Roddam are

1st The establishment of a small Model Farm at the head of Sumpagi in anticipation of that of a larger one on the scale proposed by W. R. - Col. R. suggests that the funds about Government & Private might

be taken up for the purpose, ✓
and mentions generally that
he thinks would be required
at first starting off, and the
object to which attention should
first be directed -

2nd With reference to the difficulty
experienced in shelling the Lumsden
beans, regarding which he furnishes
an interesting account taken from
the Agricultural Gazette, Cal. R.
proposes that he be authorized
to procure one or two of the small
"Kaiser Shellers" made by Ainsworth
of Sydney at 50^s each, which have
been found to work well at Syd:
- depot -

3rd With regard to the project of
utilizing the Campagne Park
for Agricultural Experiments, Col.
R. proposes its reclamation, &
that arrangements be made for
growing seed crops on it and
the field near Gov. House used
for this purpose this year -

With regard to these several
proposals

1st I am not disposed to establish
a seedling farm at or near Sydney.
There would be some advantages in
doing so, but the cost of taking up
the required extent of land would be
so great that the thing is out of
the question - But I see no reason why

3

he should not be allowed, till
the establishment of such a farm,
to raise seed crops there for im-
mediate use, either on the farm
or in distribution to Egypt; nor
such lands as can be got free or
at moderate rates of rent for this
purpose. This I quite agree in,
and the cattle labour & imple-
ments necessary therefore may
be employed by Col. Addan.
An estimate of the probable charges
for the same being duly sub-
mitted. No fixtures in the
shape of buildings or wells should
be taken in hand as the utility
thereon will necessarily be thrown
away, and the work should be
strictly limited to that which
has been done this year. A
portion of the authorized staff of
Genl. Brown might perhaps be
made available for the shelter
of the cattle & implements in use
at that end of the Station for
the above work.

On this head, I will only add
that measures should be shortly
taken to commence the est. of a
model farm at a suitable place
where it may be hoped to prove
successful.

2nd I authorized the purchase of
two of the small "Design Shakers" &c.
recommended by Col. N. -

3rd As regards the remuneration of the

Summary of work & its utilization as pro:
posed. I am in favor of the measure, but
I believe it is situated in military
territory; it will be necessary for the
construction of the measure will meet with
the concurrence of the General Govt. and
it will further be necessary to consider
if adoption will really affect the
situation now carried on below it. The
intention being to obtain a portion of
the land along the old bank, as a couple
of deep reservoirs in the same locality,
draining the drainage & store the same,
& to take off the rest of the bed for the pro-
posed cultivation. The Govt. will be requested
to enquire into & report on both these points in

Government of India
 The Secretary to Government
 Public Works Department
 Bangalore District
 Bangalore
 1st Decr. 1907.
 Sir,
 I have the honor to acknowledge the receipt of your letter of the 28th ult. regarding the proposed purchase of land for the proposed Model Farm. In reply to inform you that the same has been referred to the Deputy Accountant General for his consideration. He has advised that the same may be purchased at Rs. 25,844-2-0 at the disposal of the Deputy Commr. Bangalore District for the purchase of the lands required for the proposed Model Farm. It appears 20,000 of this sum have been charged in the accounts of 73/4 (vide D^y Accts General's memo appended) and Mr. Hudson surmises that it is not improbable that savings under all heads of the Budget may suffice to cover the charge but he cannot speak with confidence on this point until the accounts for March are closed.
 2. With reference to the Commission's enquiry if anything has been heard regarding the surplus for the farm, attention is solicited to the pencil note attached hereto.
 Yours faithfully,
 J. H. M. S.

The Offg Secretary to the Chief Commissioner
of Mysore

On

I have the honor to acknowledge the receipt of your docket GL No 4204 of the 22nd inst. in which is inclosed, the paper on Agricultural reform by the Secy to Govt. Dept of Agriculture &c. I am of opinion that a large Govt Model farm would eventually prove of the greatest utility in advancing Agriculture in this Province, but one on the scale proposed by Mr. Hume would be difficult to start all at once, and the expense wd be expensive from our want of preparation for such an innovation - There would be a difficulty in selecting the site, a want of skilled laborers & superintendents of implements seed, farm stock, buildings, manure & probably of water -

I would suggest as a beginning, with a view to the large Model farm of the future, a much smaller one being set up immediately at a very near Bangalore - On this small farm

7

I would propose to grow the usual
 crops of the country with a view to
 producing a large supply of first
 rate seed, & teach a number of
~~labourers the use of some of our~~
 improved agricultural implements,
 and a more careful style of culture;
 apply a more liberal amount of
 manure to the land and have
 everything done systematically & under
 European supervision - also carry
 on experiments on a larger scale
 with the new crops of Queensland
 Maize, Sorghum Saccharatum
 Sunflower, superior Indigo
 Potatoes, Rummat grass, root
 crops - field Cabbage, tobacco;
 &c - and see the effects of feeding
 some cattle on these new forage
 crops & of the improved system of
 chaffing straw & pulping root
 crops - ~~an~~ Dr. Heddleston pro-
 posed sending out a body of short
 termed convicts for labor - & if
 this could be carried out then labor
 wd be useful under many
 circumstances in addition to the
 established free labourers

Dr. Heddleston
 Dr. Heddleston
 Dr. Heddleston

The preliminary expenses, for such a
 small farm would not be great—
 Suppose for instance it was decided
 to rent the land about Morrison's
 Farm—what I should require would
 be to have a row of godowns (already
 built) put in repairs for granary
 workshop Cattle sheds—3 or 4
 wells dug & to no considerable depth
 as water is near the surface, some
 good working bullocks, say 4 pair—
 1 more Cultivator & bullock hoe—

Translation of an Article from a
German Periodical forwarded to the
Agricultural Gazette by Mr Mechi of
Tiptree Hall.

1. The Maize, like many other of the most valuable productions of Nature, was long in establishing itself as a crop for general field cultivation in Europe; for, being too highly valued by a few, and undervalued by the many, who were not acquainted with its useful properties, it was full a hundred years before people in general became convinced of its worth. Whether the Indian Corn is really a native production of America or not, is matter of doubt; but it is certain that the Europeans found it there upon the discovery of that part of the world, and that it had there already been long cultivated, although it had never been seen in Europe, nor even mentioned by any European author.

2. The Maize belongs to the family of the grasses, and has two kinds of blossom, namely, such as has only anthers, and such

as has only pistils, and ~~which~~ have, therefore no androgynous blossoms, but only either male or female blossoms. The plant has an upright stout stalk, scabrous and smooth, and from 3 to even 10 feet high, with long, broad, lance-shaped leaves, at the bottom of which the female spadix come forth, which are covered by a close covering of leaves, out of which the long styles of the pistils project and hang down like a large tassel of silk. The male blossoms form at the end of the stalk, a bunch of many blossomed and separated panicles, and have two chalice valves, which enclose two blossoms, each of which has two corolla valves, whilst the female chalice encloses only one blossom, which also has two corolla valves. The fruit or grain is arched on the outside, yellow, and smooth, and is wedge-shaped towards the inside, where it is attached to the cob.

3. There is only one species of Maize, but this has undergone many alterations in the course of time with regard to form and size and length of time in ripening, so that at present several varieties are known, which are generally ranked under two principal heads, namely, the American / Lea al-

~~12~~
= *tifinca s. hirsuta*), and the European Maize
(*Lea Mais et praeox*, Lin.). The former grows
to the height of from 12 to 15 feet high, the
latter to only about from 4 to 8 feet.

4. The warmer the climate the better
it suits the Maize, which ripens, nevertheless,
and comes to perfection, in countries lying very
far north; provided the situation is not cold
from being too high, too mountainous, or damp,
or one which offers hindrance to the influence
of the sun. It is said by Professor Lengerke
that on the Mecklenburg coasts of the Baltic
it will come to full perfection for many years
in succession; that in favorable seasons it
will ripen on the highest points of the Elbe;
and that in Carinthia the common tall
Maize ripens at a height of 2300 feet above
the level of the sea; and in the valley of the
Rhine, at Tross, even at the height of 5650
feet above it. It is a plant which requires
protection, but which does not do well in
the shade. The situation which suits it best
is one which lies to the south and is protec-
-ted from the north. As to soil, it succeeds
in any that has strength enough, or that
will bear manuring. But a sticky, clayey,
or damp soil it does not like, and a light

soil is more suited to it ^{than} a heavy one. It thrives well, nevertheless, in rich, deep and mellow land, and grows with the greatest luxuriance in places where the soil is so much overcharged with vegetable matter as to be too rich for the culture of other plants. At certain times the banks of a river which has overflowed, or the beds of dried up lakes or ponds, are complete hotbeds for the Indian Corn.

5. Fields in which the preceding crop was Clover, Tobacco, Beans, Hemp, or Spring Wheat, are those which are most favorable to the Maize. In some districts it is usual to sow it after spring Wheat in the more northern and colder climates, but in the more southern and warmer districts it is sown in land which has lain fallow; and land which is intended to bear this crop should be ploughed in autumn or winter as deep as possible, and then left to lie through the winter in rough, uneven furrows, in order that the earth may become more mellow and loose, and that the vermin may be destroyed.

6. In choosing the seed for sowing, the roundest and most glossy grains should be

taken. They should be separated from the cob by the hand in the spring, taking those which are in the middle of the ear and rejecting those of the ends as being less perfect. Care should also be taken to reject all those which may have a black spot at the germ. In the cultivation of the Maize it is of great importance to select good seed, because, as the plant is a large one, the seeds cannot be sowed very thick, and the failure would therefore be great if many of the seeds failed.

7. During growth, Maize suffers less than other crops from frequent changes of weather. Continued wet, provided that the water does not actually remain lying in the field, does not damage it, even during flowering time; and as little does it take harm from continual drought. The thing which is most prejudicial is continued cold, and great harm is often done in a field of Maize by a heavy storm of wind. If the plants stand too close together they grow tall and slender, and are easily thrown down and broken by a moderate storm of wind and rain, in which case no attempt must be made to raise them till the leaves are dry, but then there should be no delay. It must be done with the hand, carefully se-

15

-parating the plants from each other, and then, when stood upright, and still holding with the hand, the earth should be pressed tightly to the loosened roots with the foot. Those which may have been broken off by the wind, or which get broken in the raising, are used as fodder, as well as the shoots which come out from the stalks, and which must be pulled off. After fructification the plant should be topped - that is, the male blossom should be cut off; and then, also, should be removed the superfluous ears of corn, it not being advisable to leave more than three upon each plant. These toppings, and the ears which have been pulled off, are used as fodder.

8. Maize is subject to a disease which produces what are called blight boils. These show themselves mostly on some part of the cob, in the form of a swelling, covered with a shining and silvery white skin, being at first filled with a watery substance, which changes by degrees to a black powder. This disease is said, however, not to be at all detrimental to the corn. Sometimes, also, a kind of blight, brown, leafy tuft appears, by which the ear, or part of it, is destroyed. At other times

16

a maggot is found inside the ear, which attacks both spindle and ear. The birds are as troublesome when the corn is ripening as they are at sowing time, and every means should be used to frighten them away. One effectual means of doing this is to drive stakes into the ground, and from one to another of these to draw threads, with here and there feathers attached to them. Rats and mice, as well as various insects, such as the mole cricket, or churr-worm, are very destructive to the seed, and these are best destroyed by frequent ploughing or harrowing, by which means the earth is rendered more productive, and the harvest more abundant.

9. The uses to which Indian Corn is put are numerous, being thought so much of in America that it is much preferred to Wheat, particularly in the United States, where its yearly produce is double that of all the other kinds of corn. It forms in that quarter of the globe a very important part of the sustenance of man and beast, being used for bread, cakes, polenta, puddings, and an infinite number of other dishes, besides being a principal part of the food of oxen, pigs, sheep, poultry, and even horses. When used for bread it requires to be

mixed with a portion of Wheat or Rye flour, as alone it would be too brittle, and would not possess sufficient consistency. In Italy it is universally used for polenta, whilst in England very excellent bread, mixed with Wheat flour, has been made of it, as well as puddings and light dishes of many kinds. In some countries grits are made of the grain, which is also used for brewing beer and distilling brandy; indeed, the art of making from it a most intoxicating liquor was already known to the native Americans at the time of the discovery of America by the Spaniards. Besides all that has already been enumerated of the valuable properties of the corn, it may be added that the ears, whilst the grain is still green and milky, are extremely good to eat, either roasted or boiled, with a little butter and salt rubbed over them. The plant itself has so much sweetness in it that syrup and sugar can be made from the knobs.

10. Maize is a plant which serves for many things besides food. The stalks, and the cobs when stripped of the grain, are used as firing in places where fuel is scarce. If it is used as green fodder, then it should not be cut too young nor too old. The most

the grain is set in a separate lot which is then dried -

appropriate time for cutting it is from the beginning of blossoming time to that at which the grain is set.

11. If the Indian corn is dried in drying-houses, in an airy corn-loft or in an oven, then all the leaves are pulled off, and the stump of the cob is also broken away; the ears must not, however, be more than half a foot thick, and must be constantly turned with a rake. If the ears are to be dried by hanging them up, then the three or four innermost leaves of the husk must be left on the ear, that they may be pulled back, and gathered up together, and by that means several ears tied into a bunch, and then hung up on ropes or on poles to dry.

12. The grain being perfectly dry it may be shelled, or separated from the cob, the usual time for this being when the hard frosts set in, or in the spring. In districts where the Maize grows in no great abundance, the common way of doing this is to rub the ear of corn upon the back part of an old scythe, or sickle. In the Tyrol they

4
now a kind of large wooden four-sided funnel, which is made fast upon a bench, which projects beyond the funnel on both sides. The corn falls through the funnel into a measure placed beneath. The flail is sometimes used for removing the corn from the cob by threshing, but if done in this way the ears must be heaped up into high heaps that the stroke of the flail may be more rebounding, and may not injure the grains.

13. The most approved way, however, of separating the corn from the cob is by means of Mariot's machine, which consists of a notched iron plate, which is moved forwards in a vertical direction by means of two dented wheels and a winch, the ears of corn being pressed against this iron plate by a board running parallel to it. For this board Gardeer has substituted a kind of herculian wedge with teeth, which revolves on its axis whilst the ears of corn are cast into the space between it and the iron plate, through a tin tube, into which they are thrown.

20

In southern Germany the harvest time of the ripe Maize often falls in August; but oftener in September; in the northern districts it falls at the end of September or the beginning of October. The plucking of the ears from the stalk, which is the harvesting, and which is done whilst the plant is standing, can be done by women and children, as can also what is called the stripping. This latter must by no means be delayed after the ears are gathered in, because if they lie longer than 24 hours together they heat, a consequence of which is that the leaves become rotten, and the corn has a bad taste. What is termed stripping is taking the husk off the ear, the husk being a set of thin leaves which are tightly wrapped round it. These leaves make excellent beds, if put loosely into a case.

 Application for a husking
 machine for Maize
 Subd Offn. with the
 from [unclear] on the
 subject of a farm, and
 The Offg Secretary ²⁷⁻¹¹ ²⁷⁻¹¹
 to the Chief Commissioner
 of Mysore

I have the honor to enclose
 a curtailed article on Maize
 from the London Agricultural
 Gazette, Much of the information
 I had before gleaned from other
 sources & published in the local
 papers. Some of the information
 however is fresh. The shelling
 of Maize by the hand is a very
 laborious and lengthy affair
 and to have to perform this
 by manual labor on a large
 scale would much add to the
 expense. I see that Mr Pro-
 ueston* got a shelling machine
 from Rautome & Sons which
 cost £10, required 3 men to
 work it and only husked
 350 lbs of cobs in an hour
 Subsequently he heard of

see para 12 of
 this article - on
 shelling the Maize

*
 of the Lydager Farm

22

and procured a small
Mangle Sheller made by Mr
W. G. Ainsworth of Sydney
& states that with this machine
worked by 2 men 450 lb of
Cobs could be shelled per hour
and the work done satisfactorily
The cost of this machine in
Australia he states to be 50
shillings - I would therefore
suggest that authority be
granted for my procuring
one or two of these instru-
ments from the matter at
Sydney. The breeding of
Longhorn also is laborious
it adheres most tenaciously
to the stalks - but is beaten
out. I have the honor to be

The Offg Secretary

to the Chief Commissioner

I Mysore

Sir

Maize
Sorghum
Sunflower
Laysby
Tobacco
& new Potatoes

I paid 80 Rs
for the years
supply —
I shared it with
the Contractor
at Monson's
farm —

In continuation of my letter of
yesterday's date on Model farms,
I have the honor to request you will
bring to the notice of the Chief
Commissioner that the seed I am
now harvesting, raised on Govt
house land, will be a con-
siderable stock. Sufficient in
fact to sow a good breadth of
land. I have also a large supply
of excellent manure having
bought the whole of the dung
litter at the Court Kailkama
for this year & could I dare
say secure next year's supply
which wd be not less than
600 baidy loads — Here
we have no openhals for
my proposed farm, which

(6)

129

Could not Manure be pro-
vided except at great expense.
The Karkhana being near this
the Cartage is not costly whereas
to take the manure to the
other part of the station would be
difficult. Mr. Cops at Gool
House had suggested that
immediate measures should be
taken to secure the manure
of the regular Horse lines.
Manure is very expensive
to buy here for the natives are
merely up to its value.
I would propose to grow some
Cops again at Gool House
field and should like to see
a part of the Sumpunge
Tank made available for
other Cops. The bed of the tank

old tank bund
a piece buried off

old tank bund

portion of tank retained
deeper than before

looking to the right

is half the year dry wasteland
 & the remaining months either a
 mud or covered with a foot or so of
 water if one 3rd of its bed were
 dammed off & deepened somewhat
 to hold water all the year round
 the remainder might be drained &
 made splendid arable land with
 water available for irrigation
 such valuable land would soon
 repay the expense of reclamation.
 With the land available at moment
 I suppose at Gool Weir &
 the portion of the Lumpy Creek
 I should have enough braise seed
 crops for a very large model
 farm - I think utilizing the
 seed I have would be a better
 plan than distributing it in
 the districts for a precarious trial
 It is too valuable to waste in
 that manner - If the seed was
put sale I could now find pur-
 chasers for it at a rate far
 higher than that estimated

The excavated
 earth from
 the dam
 & the sluice
 go to manure

Good from Gool Weir

Proposed dam
 Reclaimed land &
 once the area of the
 tank.

Good from Gool Weir

(8)

31

marked at by the Native Officials
who value it at the same rate
as these Country products.
Sorghum seed sells in England
at 2¹ 6² alb. Mr Robertson
told his Queensland Maize seed
at a very high price & now he
cannot spare any for sale at
any price. I had to pay 5¹ 11²
alb for Sorghum seed beside,
the cost of its coming out to
India - A Model farm wd be
invaluable if the seed had to be
brought in the first instance at
anything like these rates -
Besides buildings, land & a
command of water all the year
round; a Model farm must have
plenty of manure & reliable
seed - I have the honor to be

M.F. Office Sunday 14th June 1872

To the Officers & Gent. St. George's

Sir

I have the honor of direction of
the Officer? Robert the favor of your
obtaining the sanction of H. S. McGovern
of, Mr Robertson, the Supr of the Govt
Farm at Madras, being permitted
to visit Bangalore for 30 days
at the end of this month, in the hope of
the many other times that may be convenient
of next, in order to give Col Meade
the benefit of his experience in
the selection of a suitable locality
for a Govt Farm that it is intended
to establish near Bangalore.

2. I am desirous to add that Mr
Robertson has expressed his
willingness to undertake the journey
at the requisite permission has
accorded -

My dear General

Wm

58

Colonel Meade has asked Mr Robertson to come up for a day or two to Bangalore to give his advice in the selection of a site for a Farm near Maloor, which the Lt. Supd of Kolar knows of. Col. Meade wishes you and Boddam to meet Mr Robertson there, on or about the 4th July, with Mr Krishnaieengar, and to arrange for the examination of the site proposed for the Farm. Mr Robertson has not written to Col. Boddam to say the exact day he will be there, but on his doing so I have asked him to let you at once know. The ground is on the road from Maloor towards the Ossoor Frontier which Col. Meade says Mr Krishnaieengar will be able to point

Sir,

WB

With reference to your letter
No. 232 of 14th ult. calling for a reply
to your Hon. Official Communication
of 2nd inst. last on the subject of
appointments & promotion. I am directed
to state that the Memo. transmitted
with the letter was duly circu-
lated to each of the Members and
other Officers under their Adm.
as was likely to take an in-
terest in the question discussed
in it & was qualified to offer
an opinion thereon.

2. A ^{copy of the} summary of the replies, as
received from the Chief of
Divisions, ^{which} was prepared in their
draft, with the remarks of the
Chief Comr. Thereon ^{is forwarded}
~~has been forwarded to the~~
~~copy of these documents~~
~~forwarded herewith~~

3. The Chief Comr. is disposed
to advocate the establishment
of one prison only in the first
instance in the neighbour-
hood of Bangalore and ex-
periments have been made,
with the sanction of the Madras
Govt. for the detention of W.
Detention the Capt. of the
Syndicate Force, to inspect
with the local Officers the
several sites

occupation of the
very high prices which
could be paid to ultimate
success -

11 There is a large extent of
unoccupied land near the
Railway Station of Matron -
which has been deposited
as particularly well suited
for the purposes of such
a farm as that it is pro-

posed to establish, and
if this is found to be the
case on further careful
examination, I proposed that
it should be fixed on as a
site for the Bangalore Farm.

The first step then with
the proper examination
of this ground, for which
special arrangements will
be made. When this is decided
on, the further measures
to give effect to the desired
object will be dealt with.

W. S.

12 In connection with the
subject of the Inquiry, I am
of opinion that the most
effective at the head of
of districts might be a
good deal by establishing
small farms at which

with ~~the~~ of the
large quantities of
manure always at
their disposal, and
fruit trees and crops
of seed grain for dis-
tribution at fair
prices. To this might
be particularly well suited
for the purposes of such
a farm as that it is pro-

posed to establish, and
if this is found to be the
case on further careful
examination, I proposed that
it should be fixed on as a
site for the Bangalore Farm.
The first step then with
the proper examination
of this ground, for which
special arrangements will

In connection with a
conference

Recd. Mr. Robertson's report on the farm
site visit - 3.9.72

31.8.72-73

Mr. Robertson proposes to take
up for this purpose, and to ~~take~~
take Engineer's cost the same as
which the same can be secured
by Govt. working to the probable
extension of the road. If it prove
a success it may be advisable
to secure at once 200 acres
of wet and 120 dry. And the
plan should show how this can
be done advantageously, the
further cost that will be so
incurred being stated, also if
any portion of the land not at
present required can be let out for
grazing at present rate of \$1.00 per acre.

proposed for the purpose
 in view to the selection of
 the one of them best suited
 to the object in view -
 4. Col Meade also hopes to
 receive from Mr. Robertson some
 practical advice on various
 points connected with the
 project and as to the best course
 to be taken for obtaining the
 services of a competent super-
 -visor to start it -
 5. The site which will proba-
 -bly be found best suited
 for the proposed farm is up-
 -lands of 1000 acres in extent,
 and quite close to the Railway,
 which is an important con-
 -sideration - In view of its being
 so situated, measures have been
 adopted for some time past
 to secure the entire stock,
 and it will be available
 without rent charge of any
 kind -
 6. When this farm has been
 fairly established on a sta-
 -ble factory basis, Col. Meade
 proposes to take up the ques-
 -tion of the establishment of
 similar farms at the head
 quarters of the other divisions,
 and in the costly character
 of these experiments, he does not
 think it prudent to commence

Cultural Reform.

Superintendent of Farms
Letter No 2114 of 16th Decr/71.

Conservator of Forests - J.L.
Letter No 1809 of 15th Decr/71.

Submits that the ^{desired} result with re-
sult to agricultural reforms, if realized,
will add materially to the wealth and
prosperity of the country, but it would
it large ~~sums~~ of money and would
be attained for many years. If
Government embark in the scheme
must be prepared for many failures
and disappointments as well as heavy
losses. Valuable animals imported
for breeding purposes will die, costly
implements and machinery will be
found unsuitable when tried, experi-
mental crops will fail.

Experiences will have to be taught
every farmer. Instructors in farming
will have to learn a great deal from the
errors before they will be fit to teach.

Success might be accomplished
with care and patience and the Govt.
would doubtless gain indirectly in
course of time, but it may be a question
whether in a country like India where
land and labor are so cheap, it would

it be profitable to extend cultivation
to improve it.

(Begs to be excused giving an
opinion on a matter of which he
is totally ignorant, but his general
opinion is that, unless some such
plan as that suggested by Mr.
Strome is started by the Government
it is impossible to expect any
improvement in this part of the
country, where there are no European
farmers; and the ryots look on, year
after year, with nothing better than
their old fashioned ideas being
presented to their minds. By
no means are natives blind to
the advantage of changes in
their mode of agriculture, or the
breeding of stock, when they
clearly understand that their
interests will thereby be advanced.

[Handwritten signature]

57
Colonel E. Poddar.
Letter No. - of 23rd Nov 71.

Superintendent Lal Bagh.
Letter No. 43 of 30th Nov 71

States that a large hort. model
you would, eventually prove of the greatest
utility in advancing agriculture in this
Province, but on the scale proposed by W.
It would be difficult to start all at
once, and the expense would be excessive
from want of preparation for such an in-
novation. There would be a difficulty in
selecting the site, a want of skilled labourers,
superintendents, and of implements seed &
& probably of water.

Suggests as a beginning, with a view to
a large model farm of the future, a much
smaller one being set up immediately at
very near Bangalore. On this small farm
grow the usual crops of the country with a
view to producing a large supply of fruit
etc, and teach a number of labourers
the use of some of the improved agricultural
implements, and a more careful style of
culture, apply a more liberal amount of
manure to the land and everything done
systematically and under European super-
vision. Also carry on experiments on a
large scale with the new crops of Lucerne
and Maize &c. &c. and see the effects
of breeding some cattle on these and
other crops and of the improved system
of chaffing straw and pulping root
crops &c.

Is of opinion that a model farm of
1000 acres situated within the limits of a
good market, would not only pay its expenses,
but yield a considerable profit to Govt.

Should water be available on the land
belonged for such a farm, many products
could be grown on a large scale in addition
to the grains and pulses usually cultivated
in this Province - such as Arrowroot, Tapioca,
Ginger, Turmeric, the best kinds of maize, Rice
& Sugar cane. These things could be worked
to for the paying part, while the introduc-
tion of other grains and stock likely
to acclimatize might be gradually
taken in hand, and brought under skilled
cultivation.

The supervision required would be of a
high order, and a man who has received
a practical and scientific training in
England would have a great advantage
in carrying out agricultural operations
in this country. But, it would seem almost
unnecessary in Mysore to subject such a
man to live out in an agricultural village
amongst the people - as in a Cantonment
more facilities are to be had for learning
the language, and with a stout pony
or by Rail, the agriculture of the District
could be readily mastered.

Chief Commissioner's Order.

of 1. After an attentive perusal of
the opinions of all the Officers of the
Reports, a summary is given herein,
and a careful consideration of
the subject, is affecting my mind,
I am of opinion that it will
not be prudent to do more in
the first instance than establish
one house in the neighbourhood
of Bangalore, which shall be pro-
-perly extended & turned to ac-
-count for the purpose for which
such institutions are required in
2. There is much truth in some
of the remarks that the Engraving
has called forth - It is in my
opinion an entire mistake to
suppose that the natives of the
country have ~~anything to learn~~
in the matter of spinning. To the
contrary, there is much in
common with their system in
the respect that is eminently
suitable & practical, & that it is
- plain to be understood and to a
- certain extent adopted by any
person who enters an Engraving
- house. Engraving is amongst the
3. As regards my mind, the plain
country consists principally of
irrigated and dry lands, the crops
grown on which chiefly consist
of sugar cane, the grain, and rice on
the latter - and probably no more
- especially raised as they would
be under any improved system
- we could induce the people
generally to adopt. I do not
believe that any improvement
is to be looked for in the cul-
- ture of cane & rice, though it
is probable that some hands
with proper training and

quite capable of getting
two crops of the latter annu-
ally, instead of one as at pre-
sent, and something might
probably be done, by changing
and to improve the quality
of the produce. But the pro-
cess of cultivation is probably
as good as any that could
be suggested. -
As regards the crops grown
on dry lands, ~~it is probable~~
~~that~~ deeper ploughing than
practised to with the same
plough would be better
in certain soils, but it is
no means certain that it
be so universally. - Under
some of the shallow soils
laying rocks, an English
could not be used. - Then
ploughing is practicable, there
can be no doubt of its ad-
vantages, but then it would be
the necessity of using a de-
scription of cattle than
the ordinary one for heavy
which would not work.
English Plough. - The exten-
sive use of manure would im-
prove the fertility and
quantity of the crop but the
times of husbandry are a
proof of their want, &
all the manure they can
on their fields. - And
whole, then, I should say
deeper ploughing, more
manure and the season
attention & application
the manure they have to
to obtain, was the only

Table

Superintendent Nandedrood.
Letter No 130 of 14th January/72.

Superintendent
Letter No 672 of 14th Jan 72

States, that what is really required to effect through
Agricultural improvement is a moderately extensive, closely
supervised, and practically managed Govt Model Farm.
At starting the Supdt is of opinion that it would be better
to commence with one only rather than half a dozen as pro-
posed by Mr. Nune. Six at once would be an expensive
experiment and it would be difficult to find a sufficient
number of men fit for the work or who could with con-
fidence be placed in charge of all at the same time.

Suggests to start the project in the immediate neighbour-
hood of Bangalore, for many reasons. Firstly, all interested
in the success of the undertaking would be able to visit the
Farm frequently without interference with other duties. The
individual in charge, will do his work none the worse for
feeling himself well looked after. Secondly, every improvement
would be more thoroughly and immediately appreciated at
Bangalore than anywhere in the outlying Talooks. The market
gardeners, growers of Poultry &c and others who supply the
market of this growing place have found it to their interest to
improve all articles and are willing to watch and take more
advantage of improvements than their less instructed brethren
elsewhere outside a certain radius. Thirdly, that with only casual
extra supervision failures are often long persisted in and success
is not sufficiently fostered here. ~~When a husbandman comes with~~
free scope to adopt them persistently he is very likely to
spend money wisely before he is checked.

The extent of land to be taken up should be 1000 acres -
though it may be necessary to utilize it all at once as if it
is found desirable to carry out any additional experiments
with Sheep and Cattle additional land when required may
be difficult to procure and also more expensive.

The experiment will doubtless prove expensive at starting
but there is no doubt about its bearing in a few years it

States that he has
and the wisdom of the measure
of the operations is stated to be
outlet but tail heavy and poor
question in connection with the
its endless varieties of soil and
Advocates tentative measure
localities, to be extended or per-
The difficulties which ap-

proved systems of agriculture
India, are due to the fact that
between drought and deluge
on a surface the character
so complete, that as a rule
of soil requiring but little
mature, while the cultivated

methods of cultivation and of rearing animals such as, ...
suffered enough from Amateuring in pretty nearly all branches of the Public Service and it
would be hardly desirable to see this repeated on an extended and costly scale in the
matters of Agriculture.

..... The Director of Public Instruction states, in reply to a communication
~~on the subject, that it would be quite feasible to have simple but carefully compiled~~
agricultural lessons, of the most rudimentary character prepared in Canarese,
 suited to India, and to form part of the curriculum in the primary schools.

Forwards copy of the Agricultural Class book prepared under the direction of
the Commissioner of National Education in Ireland, which is considered, like
others of the same series, to be well adapted to its purpose. The first pages termed
"Exercises," contain the essential principles applicable to all countries alike, and
Mr. Barnett is of opinion that it would be a very good beginning to have
portions of these "Exercises" freely translated into simple idiomatic Canarese,
and print them in the form of a book of reading lessons, to be used first
in ~~Public Schools, and then introduced in all the Taluk and Kist Schools.~~

This might be followed with such a work on vegetable Physiology,
as Colonel Hailey recommends, and giving all the information that he
suggests it should contain.

will supersede each of. The working is confined within
our own limits.

The Mr. Sup. of Hangalore and Toran strongly advocates
the proposal and the former states that he entirely agrees not
only in the spirit but in the letter of the suggestions of Mr.
Aime, and the latter is of opinion that the report in view
is really a very laudable one, and any expenditure which
may be incurred in carrying out the same will undoubtedly
be beneficial both to the people and the Government.

be exempted from payment of apportionment on the lands cropped for
the first year of trial. This is the best and prudent that can be done.

Mr. Hangalore states, that in the first place experience
of Aymé culture on the part of the natives is too readily assumed. It
is not denied that there is a great deal of aboriginal agriculture
carried on by Brahmins and other classes of people who are
not accustomed to it, or whose want of stock and capital
leads to inefficient cultivation. But there is also a great
deal of excellent tillage by substantial peasants who turn out
as abundant crops as is possible any where, and in
which no material improvement can be expected.

Nunddroog Division
Superintendent's Office

1872

Bangalore 20th August 72.

To,

The Secretary to the
Chief Commissioner
of Mysore.

Sir,

* No 1534 of the 25th
June 1872.

* Vide No 957 of 24/6/72
From Encl. as per

With reference to your Demi-Official,
regarding a report on the subject of
Mr Robertson's visit, I beg to apologize
for not having previously forwarded
a communication furnishing the requisite
information; and I should certainly
have done so, but I was under the im-
pression that Colonel Boddam would
transmit full details for Colonel Meade's
consideration.

2. On the first day, Mr Robertson,
Colonel Boddam, and myself went by
Rail to Maloor, and rode over a con-
siderable portion of the surrounding
Country

61
country, and carefully examined
the site for a Model Farm, suggested
by the Deputy Superintendent of Holar;
but Mr. Robertson condemned it at
once — He stated that the soil is not
good, the water supply not suffi-
-ciently certain, also that it is remote
from a centre of population, and
from a good and certain market,
in addition to which drawbacks, the
Villages in the vicinity are remote and
small, and labor is therefore certain
to be difficult to obtain.

3. Mr. Robertson further remarked,
that no site, the soil of which is not first
class, can be made either instructive or
paying, for many years, as special
care and unlimited manure for 3 or
4 years has to be expended on inferior
soil, before a specimen crop can be
hoped for.

4. We then arranged to visit
the

62
the vicinity of the Agreem and Bellundoo
Tanks; and the soil there was more
approved of by Mr Robertson; but
still for experimental purposes, it
would, he said, have to be greatly
improved; and he considered the six
or seven miles of cartage for every
thing required to be taken either in
or out of Bangalore, an almost in-
superable objection.

5. We made a long round that
day, accompanied also by Colonel Puckle
and Mr Ricketts, but Mr Robertson
was evidently not satisfied with re-
gard to the suitability of any site shown
him.

6. Colonel Puckle then suggested
a site some miles out on the Hingere
road; but the distance and cost of
cartage was the standing objection to
this suggestion also. It then occurred
to me that the Hukkestimanaully
and

63
and Copartnery lands were exactly
what Mr Robertson was in search
of and which would be certain to
meet with his approval; and I took
in all over them; he at once expressed
himself satisfied. He said that in
all respects, namely, soil - both for
Wet and Dry Cultivation, position,
proximity to the Market, and Centre
of population, and indeed from all
points of view, nothing could be better;
and he strongly recommended
that a Farm of about 100 Acres -
50 dry and 50 wet - should be started
here, if it should be ultimately
decided to establish one near Banga-
lore.

1. Mr Robertson's suggestion is,
(and I fully concur in his views) that
the Farm should be one both of Instruc-
tion and Experiment; and that it
should have for its scope the production
of

66 of the best grain crops, indigenous and
imported, carefully looked after
on high ^{WISDOM COMMISSION} farming principles; and
that a few cattle, Sheep, and Poultry
of the best description, should be
reared on it; also that a good prac-
tical man should be in charge,
who would instruct those under
him very carefully; but that no
District Farms should be started
until there were well trained, well-
instructed men available to take
charge of them; and if the Head
Quarter Farm should prove a success,
the District Farms could then be start-
ed, one by one.

8. Should the Chief Commis-
sioner be desirous of seeing the diffe-
rent sites suggested by Mr Robertson,
I shall be most happy to shew them
to him any morning he may name,
with the exception of Friday next, as on
that

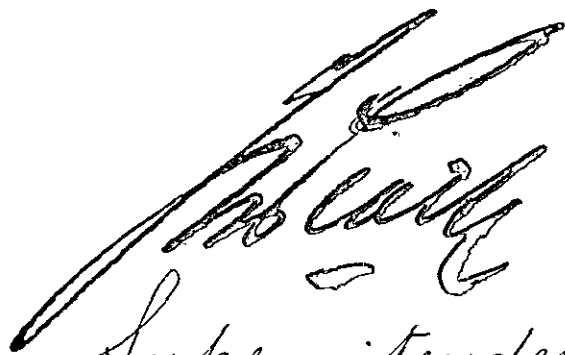

that day, I have to proceed to —
Osoottah for Session. —

G. The Papers received with your note, are herewith returned.

I have the honor to be,

Sir,

Your most obedient servant,

Superintendent

In reply to your packet of the
2nd Instant, on the subject of trans-
mitting additional information on the
project of an Experimental Farm, I have
the honor to report for the information of the
Chief Commissioner, that I went over
the boundary on the 6th Instant with
Mr. Kemp, the District Surveyor, as far as
it has been defined and mapped up
to the present time by him.

2.- A good deal has been done;
but Mr. Kemp having informed me
that he has been doing the work only
during leisure time, as he was not aware
That

that it was urgent, I have now instructed him to push on with it, as speedily as possible; and he promises to let me have the Survey of the whole Valley, in about 20 or 25 days.

3. I will ascertain all additional particulars, and will report fully as soon as the Survey Map is before me.

4. I have instructed Mr Kemp to colour his Map differently under three separate General Headings.

I.. Handwritten-paying Lands.

II. Indian Holdings.

III. Service Indians.

5. It appears to me, that this arrangement will facilitate the disposal of all matters in connection with the Lands, which it will be found necessary or advisable to

to take up. -

P. 5:0

No. 297

84

From -

Government Farms' Office
Sydapeh, 26th April 1873.

The Superintendent
Government Farms

The Officiating Secretary to the
Chief Commissioner
of Mysore

Sir,

I have the honor to acknowledge the receipt of your letter No. $\frac{7188}{R. 174}$ dated 18th March 1873 and regret that, I was unable to reply on an earlier date. I shall feel much interest in the Agricultural educational work about to begin in Mysore, and, will be glad, when I can assist in the work in any way.

It affords me pleasure to learn that the site for the Bangalore Farm near the Cal Bagh

Sal Dagh is, considered to be a satisfactory  one. It is, I think, a very suitable one. Amongst the many advantages possessed by this land, not the least, is its fitness for use at once, indeed this, is of great importance, as, the difficulty of controlling expenditure is great, when improvements of a permanent character, and, the ordinary work of the Farm, is proceeded with at the same time.

It would, in my opinion, be much the best plan to determine, at once, what permanent work is, to be done on the Estate, and, to complete this, before commencing with ordinary Farm work. If this is done, and, the Farm is started at once on a proper footing, the annual expenditure can be fixed within certain limits.

86 The permanent work to be done, needs to be well considered before being commenced with. Government Farms, besides their legitimate work, must be depôts for Stock, Machinery, Seeds &c; that, at Daigalore is, I believe, to be a Central Farm, and, as such, must be provided with Special accommodations.

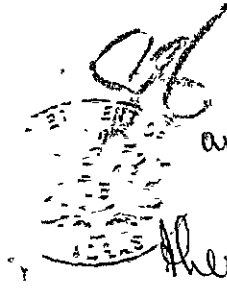

While anxious to advise economy in expenditure on permanent work, I should be sorry to advise economy that, can be practised only at the expense of efficiency. There should, of course, be no more Buildings than is really necessary to meet the wants of the undertaking you are about to launch, but, it is, certainly, better to err on the side of a little too much accommodation than, not to provide sufficient.

plan or arrangement of the .

Buildings must be such that, should there, at anytime, be any necessity for erecting other buildings - a very probable contingency with all Government Farms - these additional erections will work in, with the general harmony of the arrangement.

The relative uses of the buildings must not be lost sight of, when placing them, as, much labor and inconvenience is frequently caused from a neglect of this simple precaution.

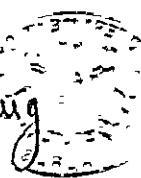

The Buildings should be constructed of some durable material. In this country, with its extremes of drought and moisture, white ants &c; it is, a serious error to use in the construction of permanent erections materials, which, are not of a durable character,
and

 and that, will require to be replaced at the end of every second, or, third year.

Repairs are costly, and, they interfere with the progress of Farm work, and greatly complicate the Farm accounting. Unfortunately, when I constructed the Madras Model Farm Buildings, only 2 or 3 years ago, I used cheap materials, and this, I have often had cause to regret, as, the repairs are so frequent and troublesome, that, it would be much less costly and certainly far more satisfactory to pay interest on a much larger sum expended in providing really permanent buildings.

I would very strongly suggest that, the work to be undertaken should be Experimental and Educational, and that, for the present, you should avoid Model, or, Commercial

87

Commercial Farming Of course, all Farming is commercial, in the sense that profit is the object sought after; but, the profit that will result from the working of a Government Farm unless, indeed, it is a mere Commercial Farm can never be exhibited, at, so many Pounds, or Rupees; any other description of Government Farm can only pay in the sense that, all Education pays. If, we can level up the Agriculture of a backward District to a level with the Agriculture of our best Districts, if, we can make famines less frequent, lessen the necessity for the frequent large remissions in assessment, utilize capital now lying idle, give regular and remunerative employment to the Agricultural Laborer, and, reduce the severity and frequency of epidemics amongst

amongst Farm Stock, the few thousand
Rupees per annum, spent, will have ~
yielded a return far in excess of the Per
Centage that, would satisfy the most avaricious
of money lenders.

Education in Agriculture will
make the rising race of cultivators more enter-
-prising, more willing to leave the beaten
paths of traditions, and, to listen to the ~
teachings of Science.

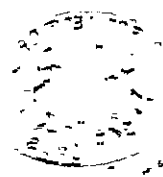

Few Ryots utilize properly the
resources at their command. As their
Fathers did, so do they. But, the present
exhausting system of cultivation practised
by them, cannot continue for ever; the open-
-ing of the Suez Canal; the greater faci-
-lities, now given, for conveyance of Agri-
-cultural Produce to distant markets, or, to

to the coast for export to other countries, will, bring the end much more speedily than, when the Agricultural produce of a district was, chiefly, consumed within its own limits.

Model, or, Example Farms are slow in producing results; indeed, such Farms are altogether unfitted to meet the exigencies of Indian Agriculture; and, they certainly can have little effect on the practice of the present generation of cultivators. They, are useful, only, when the Agricultural practice of a country has reached a certain standard of excellence, a standard, I need scarcely add, very far above the level of the Agricultural practice of this country.

I regret that, at the present moment, I do not know any one possessed of the ^{the} necessary

I have the honor to be
Sir
Your most obed^t servant

Wm R Robertson

~~9~~
necessary qualifications whose service you
could secure, to fill the office of Super-
-intendent of the Mysore Farms. But,
I would strongly advise that, an appli-
-cation should be addressed to the Princi-
-pal of the Royal Agricultural College
Cirencester, England. I know no one
more likely to assist you in the matter.
But, whoever you get, I would strongly
suggest that, he should be a graduate of
a recognised Agricultural College, be able
to lecture, and, to give instruction in
Agriculture. For a really good man,
the terms, of an Assistant Conservator of
Forest should be offered. It is very impro-
-bable that, such a man as you need,
will be obtained on less favourable
terms.]

Serial No.	99

The Secretary to the
Chief Commissioner
General Department

Sir

In reply to your d. o. l. dt. ^{19/10/93} of
the 28th Instant, I have the honor to state
that the Cash Balances are, amply sufficient
to meet the outlay of Rs. 20,000 on account of the
Government's Experimental Farm at Bangalore,
but it is doubtful whether there will be sufficient
savings in the General Budget of 1893/94 for the
purpose, and I would suggest that an addition-
al grant may be obtained from the Government
of India.

I have the honor to be
Sir

Revenue

Sir,

N^o 443 of the 18th Oct. 1873

to the Dept of
Agriculture Revenue
& Commerce

With reference to the
marginally noted letter
from the Dept of Agricul-
-ture Revenue of Commerce
sanctioning the arrangements
proposed in this office letter
N^o 3236 of the 15th September
1873, for the establishment
of an Experimental Farm
at Bangalore at an esti-
-mated cost of Rs. 35,000 of
which Rs. 20,000 are to be
provided from State Funds,
in the current year. I am
directed by the Chief Commr
to request that the authority
of H.E. the Viceroy & Gov^l Genl.
in Council may be obtained
to an appropriation of
Rs. 20,000 being made from
the General Revenues for
the purpose, as the Dept
accts^l General anticipates
that the savings from the
General Budget will fall

General

} Sir,

I am instructed to acknowledge the receipt of your Officiating Secretary's letter No. 4508/136 R., dated the 1st ultimo, requesting sanction to a special grant of Rupees 20,000 from the general revenues of the Mysore Province, for the Model Farm to be established at Bangalore, it being anticipated that the savings from the General Budget will fall short of the sum required for the farm.

2. His Excellency in Council is unable to sanction the additional grant called for during the currency of the present Financial year, and desires that if the required money cannot be found by effecting savings in the current year's Budget, the establishment of the Farm should lie over until next year, provision being made for it in the Budget for 1874/75.

I have the honor to be,

Sir,

Your most Obedt. Servt.

M. W. C.

Bangalore 21. April 1874

To,
The Dy. Acct General
Mysore

Sir,
Referring to your letter no
2670 dated 30th October 1873,
I am directed to forward for
your information copy of a
letter from the Govt. of India in
Foreign Dept. no 26759 of the
31st Decr 1873, intimating
that His Exy the G. G. in C.
is unable to sanction a
special grant of Rs 20,000
from the General Revenues of
the Province for the Bangalore
Model Farm, and that if
the amount cannot be
= vided from savings in the
Budget of 1873/74 the esta-
= blishment of the farm should
lie over till next year, provision
being made for it in 1874/75.
2nd The Chief Commissioner
understands that the sum
required for the purchase of
the land for the Model farm
viz Rs 25,844-2-0, was placed
at the disposal of the Deputy
Comr of Bangalore, as author-
= ized in this Office letter no 492.

of the 29th November 1873,
and that of this sum Rs.
20,000 have already been
charged in your accounts
for 1873/74, - but as there
appears to be a doubt
that the past year's General
Savings bill, ^{Rs. 10} suffice to
cover this charge, the
Chief Commr requests that
you will be so good as
to arrange to make up
any deficiency that may
occur from local funds
General. -

To The Offg: Secretary to Chief Commissioner
General Department

Sir,

Referring to your letter No 496 of the
21st ultimo forwarding copy of Government
of India No 2675 G. of the 31st March last
relative to the adjustment of the sum of Rs 20000/-
paid for the purchase of land at Bangalore
for a Model Farm, I have the honor to state for
the Chief Commissioner's information that as I
find that there will be sufficient savings in
the aggregate grants of the Budget of 1843/4
to meet the cost the amount in question has
been adjusted in the accounts of that year.

I have the honor to be,

Sir,

Your most Obedient Servant.
